

Illusion and Reality - Method Book for Studies in a Dying Culture and All Works in Fact - For Soviet Learning of Basic and Experimental Truths of Science - (Including a Note on Creative Experimentalism)  
By Christopher Caudwell

- I. Form a Sedimental Illusion and produce Illusion as based on any object - then in fact compare it to reality which becomes or is in becoming a revelation - fundamentals are revelations.

Imagine then a computer, it is illusionary, which then in sedimental logic is its connections on the hardware and software dynamic that produces a internet connection to a website input which then is symmetric for all, which then becomes using a computer.

The reality compared to it is a human body which is so complex which then works on the computer and this then is a virtual reality which is where we are learning Soviet principles in the future because of the new invention and a Leninist power which is a conjecture which sounds real - unless there is illusion which has to be fought till revolution wins.

- II. Studies in a Dying Culture based on this Idea of Learning

Bourgeois culture is based on the illusion that social relations of production have a sedimental logic towards the production of commodities and business forms which do not reveal their character as scientific - which is why the scientific outlook remains belonging to Communism which also maintains its guarantee in practice.
